Education

Master of Science, Computer Science — **Aug 2021 - Feb 2023**
University at Buffalo, The State University of New York — *Buffalo, NY*

Bachelor of Engineering, Computer Science — **Sep 2016 - Aug 2020**
SSN College, Anna University — *Chennai, India*

Skills

Software Python | Java | TypeScript | C++ | JavaScript | NodeJS | Angular | XML | HTML | MySQL | CSS | R
Technologies AWS | scikit-learn | TensorFlow | Docker | Flask | SQL | Tableau | Agentic AI GenAI stack | Android

Experience

DXC Technology — **Dec 2023 - Present**
Sr Analyst II Software Engineering — *Dallas, TX*

- Designed and owned a production-grade serverless AWS microservices architecture using Lambda, API Gateway, DynamoDB, S3, and Step Functions. Implemented event-driven workflows with SQS/SNS, automated CI/CD pipelines, and provisioned infrastructure using Terraform. Designed extensible service patterns to support LLM-powered applications, AI Agent driven workflows.
- Collaborated with product, architecture, and engineering teams to translate business requirements into scalable cloud-native microservices architectures. Produced HLD/LLD documents, API specifications, sequence diagrams, and architecture artifacts; participated in technical design reviews.
- Drove architectural decisions for backend service evolution, evaluating trade-offs between serverless and containerized workloads (EC2/Docker), defining API contracts and collaborating cross-functionally with product, QA, and infrastructure teams to deliver scalable, maintainable solutions.

DXC Technology — **Feb 2023 - Dec 2023**
Application Developer — *Dallas, TX*

- Contributed to feature development for event-driven insurance web applications by implementing backend services in Java/Spring Boot, modifying REST endpoints, troubleshooting defects using application logs and debugging tools, and writing unit tests to ensure reliable and maintainable code.

DXC Technology — **Jun 2022 - Dec 2022**
Software Engineer Intern — *New Orleans, LA*

- Supported the implementation of NLP pipelines leveraging NLTK and SpaCy for text pre-processing, entity recognition, and context extraction in an AWS Lex–based chatbot system.
- Collaborated on training and tuning TensorFlow-based text classification models on AWS SageMaker for sentiment analysis and intent classification, achieving 92% validation accuracy and improving response relevance.

Projects

Cortex Catalyst — **Oct 2024 - Present**

- Built agent-based GenAI workflows using CrewAI and n8n to orchestrate multi-agent systems for structured reasoning and task automation, integrating Retrieval-Augmented Generation (RAG) with vector databases for contextual query resolution.
- Designed structured prompt templates leveraging few-shot learning and chain-of-thought prompting to enhance reasoning quality, reduce hallucinations, and improve deterministic outputs.

One Shot Learning Face Recognition Siamese Networks — **Jan 2022 - Sep 2022**
University at Buffalo, The State University of New York — *Buffalo, NY*

- Built a One-Shot Learning image similarity model using a Siamese Neural Network in TensorFlow, optimizing embedding space representations to achieve high-accuracy predictions while significantly reducing dataset size requirements.

Publications

- **Hariny Ganapathy** and Geetika Bandlamudi, Yamini L, Bhuvana J, T.T. Mirnalinee, "Deep learning models for estimation of flood severity using Satellite and News Article Images," *MediaEval'19, 27-29 October 2019,*, Sophia Antipolis, France.

Certifications

- AWS Certified Developer – Associate *Amazon Web Services Training and Certification*
